

Poems Addressed or Relating to Lucasta. Miscellaneous Poems. Commendatory Verses, Prefixed to Various Publications Between 1652 and 1657

Filesize: 4.22 MB

Reviews

This ebook might be really worth a go through, and much better than other. I have got study and i am sure that i will going to study again once more in the future. You will not feel monotony at at any moment of your own time (that's what catalogs are for regarding in the event you request me).

(Krista Lindgren)

POEMS ADDRESSED OR RELATING TO LUCASTA. MISCELLANEOUS POEMS. COMMENDATORY VERSES, PREFIXED TO VARIOUS PUBLICATIONS BETWEEN 1652 AND 1657

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 84 pages. Original publisher: Columbus, Ohio : U. S. Dept. of the Interior, U. S. Geological Survey ; Denver, CO : U. S. Geological Survey, Branch of Information Services distributor, 2003. OCLC Number: (OCoLC)53473113 Subject: Flood forecasting -- Ohio -- Mathematics. Excerpt: . . . DEVELOPMENT OF FLOOD-FREQUENCY DEVELOPMENT OF REGIONAL REGRES-ESTIMATES FOR STREAMFLOW-GAG-SION EQUATIONS ING STATIONS Regional regression equations for estimating flood-peak dis-charges were developed as a two-step process involving both Flood-frequency estimates for 305 streamflow-gaging sta-ordinary and generalized least-squares regression tech-tions in Ohio and adjacent states (table 4, fig. 1) were deter-niques. Ordinary least-squares (OLS) regression techniques mined by fitting the base-10 logarithms of the annual peak-were used in the first step to determine the best models relat-flow series to a log-Pearson Type III distribution. The flood-ing basin characteristics listed in appendix B to each t-year peak discharges corresponding to selected annual exceed-recurrence interval peak discharge estimate. In the second ance probabilities were computed by the following equation: step, the final model identified by means of ordinary least-squares regression techniques was used in generalized least-logQ X KS, (3) squares regression analyses to develop equations that can be t used for predictive purposes. where Q is the t-year recurrence interval streamflow in t cubic feet per second, Ordinary Least-Square Regression X is the mean of the logarithms of the annual peak flows, Each basin characteristic listed in appendix B was tested as K is a factor dependent on the recurrence interval a potential regressor variable; however, selection of regres-and the skew coefficient of the log-transformed sor variables for use in the final model was based on the fol-annual peak flow series, and lowing criteria: S is the standard deviation of the...
