Excerpt from The Principles of Organic Chemistry The development which has taken place in organic chemistry since this book was published has made necessary to prepare a new edition. This development has been marked on both the theoretical and the practical sides of the subject. While the advances in the pure science have been largely of such a character that they should not be included in an elementary textbook, the development of industrial organic chemistry. has tended to vitalize the subjects and to be arouse the internet of the beginner As the result of the recent war there was there was an increased demand for a large number of the organic compounds of industrial importance. The search for new methods of preparing the substance on the large scale led to the utilization of reactions which were formerly of theoretical interest only, or to application of were methods such as those of catalysis and electro-chemistry. These new industrial process have been emphasized as fully as is consistent with the scope of the book. The growth of the dyestuff industry in America made it desirable to broaden to some extent the treatment of the aromatic compounds and to include brief descriptions of the more important intermediates and of the sulphur and vat dyes. The increasing use of the organic derivatives of mercury and of arsenic in combating disease made it necessary to introduce and elementary consideration of the general reactions underlying the preparation of such compounds. The renewed interest in the application of organic compounds in warfare has led to the description of the more important war gasses and the new explosives. The consideration of the chemistry of the fats, carbohydrates, and protein has been...
