The speed should be varied from a low value to one somewhat above normal and data taken for a number of points throughout the range. Data. With the field normally excited, obtain simultaneous readings of speed and terminal pressure on open circuit, for speeds varying from a low value to one considerably above normal. Curve. Plot a curve between terminal pressure and speed using the latter as abscissas. Explain. How the curve would be affected if a constant current were taken from the armature. No. 50. RELATION OF SPEED TO PRESSURE IN A SHUNT DYNAMO. References. Nichols, Vol. 2, p. 83; Thompson s Dynamos, p. 213; Fisher-Hinnen, p. 91; Sheldon, p. 102. Object. To show the relation of speed to terminal pressure when the exciting current varies with the pressure. Theory and Method. The theory is best illustrated by a graphical treatment. In Figure 50, M1 is the magnetization curve at normal speed and OR the field resistance line for rated pressure at no load. This curve is plotted with volts as ordinates and field current as abscissas. M2, Ma, Mt and M5 are the magnetization curves at 1 , 1/2 and 4 speeds, respectively. They are obtained from M1 by taking the ordinates in direct proportion to the speeds. The intercepts Tv T2, Ts, Ti, and Ts of these curves with the field resistance line, determine the simultaneous values of field current and terminal pressure at the respective speeds. To obtain a...
