Excerpt from An Essay on Spermatorrhoea, and Urinary Deposits: With Observations on the Nature, Causes and Treatment of the Various Disorders of the Generative System; Illustrated by Numerous Interesting Cases It will be seen that great importance is attached to chemical and microscopical examinations of the urine; for I feel assured that much of the success in the treatment of spermatorrhoea, will depend upon the information to be Obtained from urinary investigation. It is a source of gratification to me that the profession, not only in England, but in the Colonies, begin to see the importance Of attending to this subject; and, if I may judge from the numerous communications I receive from professional gentlemen, both at home and abroad, the time is not far distant, when this subject will receive that general attention which its importance deserves.
