Not illustrated. 1922 Excerpt: .before the inches and fractions are converted to decimals of a foot. The weights should be placed in the spaces provided for them; fine vertical lines are printed on the forms to simplify the alignment of figures for totaling. When all members of a group weigh the same, a line can be drawn under the weight of the last component part and a single total can be recorded in the blank space between groups, as for F 9. When the weights of the members of a group differ, each must have its own total; to save space each total may be recorded opposite the mark of the proper member, as for F 7 and F 8 or for S 4, S 5 and S 6. Care must be taken to include in these totals only the weights of the component parts which form the corresponding members, allowing for material cut away. The difference between the weight of the heads of shop rivets and the weight of material punched out for open holes should be entered upon the shop bill with the proper sign. In counting rivets and holes special attention should be given to symmetrical notes, and to group spacing; each rivet has two heads. The weights of rivets and bolts are given on page 304. The weight of a bolt or a rivet may be obtained by the proper combination of the weights of the head, the nut, and the shank of proper length. The...
