Reviews

This book is definitely not straightforward to get started on studying but extremely exciting to read. It is really simplistic but shocks in the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

The above Table renders the calculation of the calorific effects of any given gaseous mixture, whose centesimal composition is known, a matter of extreme simplicity. It is only necessary to obtain the sum of the multiples of the percentage of each component gas into its calorific capacity, as given in this Table, and divide by 100. To serve as examples of these modes of computation, we here cite, in tabular forms, the results of some analyses of a number of gaseous mixtures made by us during the past winter (1868-69). These analytical results, it may be remarked, possess points of novelty and importance, both scientific and practical, which will bring them up again hereafter, in other connections. They are here placed on record. Table III, gives the results of two analyses of gaseous mixtures obtained by passing steam superheated to incandescence upwards through a mass of anthracite coal heated to a high degree in a clay retort of a novel construction, according to what is now known as the Gwynne-Harris, or American Hydrocarbon-Gas System. In this table the results are calculated without carbonic acid and sulphuretted hydrogen, which, with traces of nitrogen, and sometimes of oxygen, are found in the unpurified anthracite gas. TABLE III. ANALYSES OF ANTHRACITE HYDROCAKON GAS: By SILLTMAN AND WTJETZ. In Table IV, column (1) gives the results...
