Defense Logistics: Actions Needed to Overcome Capability Gaps in the Public Depot System: Gao-02-105 (Paperback)

By -

Bibliogov, United States, 2013. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.The Department of Defense s (DOD) policy and practices for developing core depot maintenance capabilities are creating gaps between actual capabilities and those needed for future national defense emergencies and contingencies. If the existing policy is not clarified and current practices continue, the military depots will not have the equipment, facilities, and trained personnel to provide logistics support on many of the weapon systems and related equipment for military use in the next five to 15 years. Although DOD intends for its depots to have these capabilities, actual practices are much different. Core policy does not adequately take into consideration future systems repair needs and the impact of retiring systems on developing capabilities. Furthermore, the practices of individual services hinder the establishment of future core capabilities and management oversight. Additional investments in new facilities, equipment, and workforce training and revitalization have been limited for some time. Finally, there is no strategic plan and associated service implementation plans to create and sustain a viable depot maintenance capability.

Reviews

This publication is amazing. It is definitely basic but shocks in the fifty percent of your publication. You wont feel monotony at anytime of your own time (that's what catalogues are for concerning if you question me).

-- Prof. Kirk Cruickshank DDS

This kind of book is every little thing and taught me to looking ahead of time and a lot more. I am quite late in start reading this one, but better then never. I found out this book from my dad and i encouraged this pdf to find out.
