Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Physical Aspects of Excitation in Muscle The cell, which is the fundamental unit of the living organism, represents a highly complicated physico-chemical system. Each cell may be considered as a self-regulating mechanism probably composed of colloidal systems, each one of which is separated from the other by some limiting membrane. These systems may act independently but harmoniously, so that a delicate state of equilibrium is maintained. In a larger sense, this conception may be applied to each individual organism, The various separate activities may mutually influence and control one another, with the result that a definite and constant unity of structure and activity is maintained throughout the whole organism. Such functional integration implies a ready transmission of influence between different parts of the living system. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
