## D. PEDRO II

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 22 pages. Original publisher: Washington : Dept. of the Interior, Bureau of Mines, 1978. LC Number: TN23 . U7 no. 8317 OCLC Number: gp 79006190 Subject: Mine gases. Excerpt: . . . a l s o farmed during coalification, but simple fragmentation of a long-chain molecule does not account for the observed composition of hydrocarbon gas emitted from coal. COMPOSITION OF COALBED GAS Coalbed gas is frequently referred to as methane because methane is the major component ( 90 pct ) I n many theories of coalification, methane was believed to be Ethane i n coalbed gas was attributed to contamination-the only hydrocarbon gas formed. t i o n from natural gas horizons below the coal ( 11 ). H, , CO, , O, , and He are h, Carbon dioxide can be formed by decarboxylation of the coal precursor or by oxidation during early stages of coalification. Nitrogen and oxygen i n coalbed gas may be occluded during deposition of the organic sediment or may be introduced by percolating ground water. Helium i n coalbed gas is a product of radioactive decay. gas chromatographic analyses of free-flowing gas from ( 4 ) I n a previous study coalbeds demonstrated that coalbed gas contains methane and higher-molecular-weight hydrocarbons ( table 8 ). The alkanes ethane, propane butane, and pentane were the , only higher-molecular-weight hydrocarbons detected i n gas samples taken directly The unsaturated hydrocarbons emitted when coal was heated were not from coalbeds. found i n coalbed gas samples obtained at ambient temperature. The amounts of butane and pentane detected were insufficient to determine the r a t i o...
