

FPGA Architecture Design for Distributed Optical Fiber Sensors

By Mulualem, Yekal

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Over the last few years fiber sensing technology has been rapidly progressing for a wide range of industrial applications in strategic sectors such as energy, transportation and security, also including civil and structural engineering, geothermal and environmental monitoring. Advanced control electronics play a key role in such developments, allowing for significant performance improvement in the sensor systems. In this thesis a new FPGA architecture is presented and demonstrated to efficiently implement decoding processes in optical fiber sensors based on Raman scattering and cyclic simplex coding for distributed temperature measurement. The proposed technique allows for a significant SNR enhancement and consequent sensing range extension, allowing for temperature measurement over several tens of kilometers with meter scale spatial resolution. The target groups for which the book was written: Researchers in the field of Fiber Optic Sensors, Networking and Administrations; Students group for Network plan and Design specializations; Academicians in the relevant field of networking architectural specializations. | Format: Paperback | Language/Sprache: english | 84 pp.

Reviews

These kinds of pdf is the best publication readily available. This is for anyone who statte there had not been a well worth reading through. You wont truly feel monotony at at any moment of your own time (that's what catalogs are for relating to if you ask me).

-- Neil Halvorson

A brand new eBook with an all new point of view. I could possibly comprehended every little thing using this written e publication. Your life span is going to be change once you comprehensive looking at this publication.
