This observation, that a fractional separation of oils in vaseline had been effected, suggested to D. T.Day that a like result might be obtained with crude petroleum. He applied this method to a sample of the green crude petroleum from the third sand, Venango County, Pennsylvania, and found that light products, chiefly gasoline, first appeared when such crude oil was allowed to filter down through a long glass tube filled with granulated or powdered fuller s earth. Following this a more elaborate system of specially constructed funnels similar to those used by the refiners of vaseline in testing the comparative value of various...
