Excerpt from Investigation on the Effect of Preparatory Finishing and Resin Treatment on the Tear Strength of Various Commercial Cotton Fabrics I are summarized in Table 1. The range of fabric weights runs from 3 to 8 ozs. Per square yard and the fabric textures vary from (54 x 49) to (139 x These fabrics represent a diversity of fabric type and finishing treatment. To permit detailed analysis Of the tear strength characteristics exhibited by these fabrics, a series Of tensile studies have been made which give different estimates of the yarn strength. The yarn strength as it lies in the fabric is approximated by dividing the average tensile strength of a 1 - inch strip of fabric by the average number Of threads per inch. The single end yarn strength determined in this fashion is called the IN fabric yarn strength. Two measurements of single end yarn strength have been made on yarns removed from fabrics in. Samples 1 to 6. These tests were made at a 10-inch and one-half inch gage length. The tests conducted at the 10 - inch gage length were also used to make crimp measurements.
