

## Material Limits of Multicrystalline Silicon in Advanced Solar Cell Processing

Filesize: 3.24 MB

### **Reviews**

*The publication is not difficult in go through better to comprehend. I could comprehended everything using this created e publication. Its been designed in an exceptionally easy way in fact it is merely soon after i finished reading through this ebook by which basically transformed me, modify the way i really believe.*

## MATERIAL LIMITS OF MULTICRYSTALLINE SILICON IN ADVANCED SOLAR CELL PROCESSING

To read **Material Limits of Multicrystalline Silicon in Advanced Solar Cell Processing** PDF, remember to click the button beneath and download the document or gain access to other information which are have conjunction with MATERIAL LIMITS OF MULTICRYSTALLINE SILICON IN ADVANCED SOLAR CELL PROCESSING ebook.

Fraunhofer Verlag Jan 2015, 2015. Taschenbuch. Condition: Neu. Neuware - Multicrystalline silicon from directional solidification currently has the highest market share of all materials in silicon photovoltaics. The inferior electrical material quality compared to monocrystalline silicon drives the need for a detailed understanding of the material-caused efficiency limits. This question is tackled in thesis by a wide spectrum of characterization methods, cell processes, and material classes with the aim of gaining a complete picture of the material limits of multicrystalline silicon. The challenge of laterally varying and injection-dependent recombination in mc-Si is approached by a set of characterization techniques based on photoluminescence imaging that allow for a detailed, quantitative and spatially resolved characterization of efficiency losses. With these powerful characterization methods the impact of different improvements in the production process is quantitatively assessed: increased feedstock and crystallization crucible purity, doping with phosphorus instead of boron, and the influence of wafer thickness. The analysis is closely linked to advanced solar cell processing, including optimized phosphorus diffusion, boron diffusion, dielectric rear side passivation, honeycomb texturing, and silicon heterojunctions. 288 pp. Englisch.
