Excerpt from The Gleaner: Anniversary Issue; June, 1922 In Michigan, which is typical of many of our sections of U. S. Strawberries is the most important small fruit crop. While they are advantageous to grow for home use their particular value results from their market value. In our section of the country we speak of strawberries as the Mortgage Lifter. Farmers living near towns have an advantage over distant farmers since marketing and obtainance of labor are facilitated. Strawberries can be grown successfully on almost any type soil providing the fertility is present in an available form. The preferred soil is of a sandy loam texture, possessing cool moist growing climate and having good air and surface drainage. If strawberries are to be grown in a sandy soil manure or green manure is required in order to maintain an even constant water supply. From the time that the strawberry blossom appears until the fruit is ripe is about four weeks and a good supply of water is necessary to supply the demands of the plant.
