Presenting the most complete resource of its kind, the Handbook of Biotransformations of Aromatic Compounds examines 20,000 aromatic compounds researched since 1972, and assembled from all the major, relevant journals. The author focuses his coverage on the biotransformation in animals, plants, and microbes while remaining within the scope of aromatic compounds that contain, or are fused with, at least one aromatic C6 ring. Part One lists each compound alphabetically along with the forward and reverse mechanisms of its metabolism in specific organisms. Part Two characterizes the different types of organic reactions that have been identified - including formation and degradation, oxidations and reductions, substitution, and transfer reactions - and the enzymes associated with those reactions. The author cites selected references for enzymes that are well documented while filling in the details for...
