

The Deaf Child in a Hearing Family: Nurturing Development (Paperback)

By Arthur Boothroyd, Janice Gatty

Plural Publishing Inc, United States, 2011. Paperback. Condition: New. Language: English . Brand New Book. Hearing enables us to identify events from the sounds they make. Because sound travels a long way, we can identify events at a distance. Because sound travels rapidly we can identify events almost as soon as they occur. And because sound travels around corners we can identify events even when the objects involved cannot be seen. One of the roles of hearing is that of watchdog. It works when we are not looking. It works when our eyes are closed. And it even works when we are asleep. During evolution, the survival advantages of such a sense are obvious. Many animals have further capitalized on hearing by generating sounds and using them for communication. In human beings, this development has merged with advanced cognitive abilities to produce spoken language. Language, regardless of its form, is key to many aspects of human development - cognitive, intellectual, literary, cultural, social, and emotional. Spoken language is the form of choice in all human societies. And hearing is crucial to the spontaneous acquisition of spoken language by the developing child. Conversely, hearing deficits place the development of spoken language...

Reviews

Excellent electronic book and valuable one. Better then never, though i am quite late in start reading this one. I am very easily can get a delight of studying a written book.

-- Anastacio Kreiger DDS

This ebook is amazing. It typically will not price excessive. I discovered this pdf from my dad and i recommended this publication to learn.
