This method, which differsconsiderably from either of the former, consists in supposing the root of the given equation, xi ax2-f-bx-j-c 0 (1), to be of the following trinomial surd form x--Vp--Vq-Vr where p, q, r: denote the roots of the cubic equation of which the coefficients, g, and the absolute term A, are the unknown quantities that are to be determined. following general formulae first given by Etjler; which are remarkable for their elegance and simplicity.
