LOCAL ENTROPY THEORY OF A RANDOM DYNAMICAL SYSTEM (PAPERBACK)**DOWNLOAD**

American Mathematical Society, United States, 2015. Paperback. Condition: New. Language: English . Brand New Book. In this paper the authors extend the notion of a continuous bundle random dynamical system to the setting where the action of \mathbb{R} or \mathbb{N} is replaced by the action of an infinite countable discrete amenable group. Given such a system, and a monotone sub-additive invariant family of random continuous functions, they introduce the concept of local fiber topological pressure and establish an associated variational principle, relating it to measure-theoretic entropy. They also discuss some variants of this variational principle. The authors introduce both topological and measure-theoretic entropy tuples for continuous bundle random dynamical systems, and apply variational principles to obtain a relationship between these of entropy tuples. Finally, they give applications of these results to general topological dynamical systems, recovering and extending many recent results in local entropy theory.
