

British Museum (Natural History), Vol. 12: Instructions for Collectors; No; 12; Worms (Classic Reprint) (Paperback)

Filesize: 5 MB

Reviews

Unquestionably, this is the best operate by any author. It is among the most amazing pdf i actually have read. Its been designed in an remarkably basic way which is just right after i finished reading this pdf by which basically altered me, change the way i believe.
(Harold Spencer)

BRITISH MUSEUM (NATURAL HISTORY), VOL. 12: INSTRUCTIONS FOR COLLECTORS; NO; 12; WORMS (CLASSIC REPRINT) (PAPERBACK)

Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from British Museum (Natural History), Vol. 12: Instructions for Collectors; No; 12; Worms The term Worms, as here used, embraces a great many animals which bear very little resemblance to the popular conception of a worm. Some little idea of their variety and of the situations in which they are most likely to be found may be gathered from the lists given below. It will be seen that the parasitic groups are A 2 and 3, C, D, E, and those mentioned on pp. 10 11. The majority are internal parasites of vertebrate animals; but their position in their hosts varies very greatly. Many live in the alimentary canal, but many occur in other cavities and organs of the body, eg. The heart, liver, lungs, kidneys, bladder, body-cavity, nasal cavities, or even in the blood-vessels, bronchial tubes, and among the muscles and connective tissue. Some of the Trematodes and Leeches are external parasites of fishes and other aquatic or amphibious animals, and may be found attached to their skin, especially on the fins, or on the gills and in the cavity of the mouth. Hence one must not be content merely to Open the intestines of an animal and make a hasty examination there, but all parts of the animal ought to be inspected. Even the connective tissue between the skin and flesh often contains parasites. Filariae (nematodes), for instance, often choose this situation, where they lie coiled up in capsules or cysts and the larval forms of various other parasites may be discovered in similar positions. When found in the connective tissue or in the peritoneum covering the internal organs and body-cavity, or in the walls of the stomach, etc.,...
