

## Future Research Needs for First- And Second-Generation Antipsychotics for Children and Young Adults: Future Research Needs Paper Number 13

Filesize: 7.11 MB

### **Reviews**

*Comprehensive manual for ebook fans. I am quite late in start reading this one, but better then never. Its been written in an exceptionally basic way and is particularly merely soon after i finished reading this publication in which really changed me, affect the way in my opinion.*  
(Prof. Antone Olson II)

## FUTURE RESEARCH NEEDS FOR FIRST- AND SECOND-GENERATION ANTIPSYCHOTICS FOR CHILDREN AND YOUNG ADULTS: FUTURE RESEARCH NEEDS PAPER NUMBER 13

To download **Future Research Needs for First- And Second-Generation Antipsychotics for Children and Young Adults: Future Research Needs Paper Number 13** PDF, you should access the web link listed below and save the document or have accessibility to other information that are have conjunction with FUTURE RESEARCH NEEDS FOR FIRST- AND SECOND-GENERATION ANTIPSYCHOTICS FOR CHILDREN AND YOUNG ADULTS: FUTURE RESEARCH NEEDS PAPER NUMBER 13 book.

CreateSpace Independent Publishing Platform. Paperback. Book Condition: New. This item is printed on demand. Paperback. 70 pages. Dimensions: 11.0in. x 8.5in. x 0.2in. The purpose of this future research needs (FRN) report is to develop a list of stakeholders research needs related to the comparative effectiveness of first- and second-generation antipsychotics (FGAs and SGAs) in pediatric and young adult populations. This FRN report is based on an Agency for Healthcare Research and Quality (AHRQ) comparative effectiveness review (CER) titled First- and Second-Generation Antipsychotics for Children and Young Adults. We reviewed the CER in draft form. The purpose of the CER was to review and synthesize the evidence regarding the benefits and harms of FGAs and SGAs for the treatment of various psychiatric and behavioral conditions in children and young adults 24 years of age or younger. FGAs and SGAs are commonly categorized into two classes. FGAs, also known as typical antipsychotics, were developed in the 1950s. FGAs are used to treat psychotic symptoms such as auditory and visual hallucinations and delusions through several proposed mechanisms, including through the blockade of dopamine neuro-receptors. FGAs are associated with various adverse effects. These side effects include extra-pyramidal symptoms (EPS). EPS is a group of movement disorders, including acute dystonic reactions (severe spasms of various muscle groups), akathisia (a feeling of motor restlessness), pseudo-parkinsonism (medication-induced motor slowness and rigidity), and tardive dyskinesia (repetitive low amplitude movements, most often of facial muscles, insidious and chronic in nature). The most severe antipsychotic-associated potential side effect is neuroleptic malignant syndrome (NMS), characterized by hyperthermia, rigidity, rhabdomyolysis, renal failure, delirium, cardiovascular instability, and death. SGAs, also known as atypical antipsychotics, emerged in the 1980s. SGAs are generally thought to have a lower risk of EPS. The risk of NMS is rare for both medication classes, and researchers are uncertain...
