Excerpt: . forth leaves, and the apples remained on and ripened; and both the branches bore so plentifully, that One broke with its load, and it was necessary to prop the other. The theory of the success of these curious experiments confirms that delivered above concerning the scars made by the junction of ingrafted scions with the stocks; and it is probable, that three.or four circular incisions through the bark on viviparous pear or apple trees, or a spiral incision, as described in Sect. ix. 2. 8. might answer the purpose without detracting and replacing the bark; as scars or callous circles would be thus produced, which might render it more difficult for the new caudexes of the embryon leaf-buds to be generated, or their parts united, and consequently increase the number of flower-buds. Mr. Fitzgerald further observes, that he changed cylinders of the bark...
