Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1879 Excerpt: .for example, would have made the limit between his 3rd and 4th magnitudes the brighter. In fact we might call these numbers a scale of magnitudes. If there were 175 stars brighter than the 4th magnitude, we might say that the limit between the two was, upon this new scale, the 175th magnitude. To determine his scale of equable distribution he further says, I count all the stars which an observer finds of each magnitude in the northern heavens. Denote the sum of these, or the number as bright or brighter than each magnitude by $v(m)$. Then, for the scale of equable distribution, the numerical magnitude being m , we have $\ln v(m) = 1.892958 \log v(m)$. In this way we shall obtain the magnitudes upon the scale of equable distribution of the limits of each class in the scales of the different observers. Adopting this principle, Mr. Peircc proceeds to reduce the magnitudes in the following Catalogues: Durchnutsterung, Uranometria Nova, Heis Atlas Gcelestis, Ptolemy, Al Sufi, Ulnggh Beigh, Tycho Brahe, Hevolius, William Herschel, Zoilner, John Herschel, Seidel, and Behrmann; the discussion of each Catalogue being followed by a Table for the reduction of its magnitudes to the scale of equable distribution. The Durehtnuttering is considered by the author one of the best collections of star magnitudes we have, and he publishes a count of the stars of each tenth of a magnitude in this Catalogue. In discussing Heis s Catalogue, a long list of...
