Excerpt from Anatomical and Pathological Observations Although it shew not the agent, yet it sheweth a rule and analogy in nature, to say, that the solid parts of animals are endued with attractive powers, whereby from contiguous fluids, they draw like to like; and that glands have peculiar powers attractive of peculiar juices Berkeley. Even herein consists the essential difference, the contra-distinction, of an organ from a machine; that not only the characteristic shape is evolved from the invisible central power, but the material mass itself is acquired by assimilation. The germinal power of the plant transmutes the fixed air and the elementary base of water into grass or leaves; and on these the organic principle in the ox or the elephant exercises an alchemy still more stupendous. As the unseen agency weaves its magic eddies, the foliage becomes indifferently the bone and its marrow, the pulpy brain, or the solid ivory. Coleridge.
