

Design an Ultra Wideband Low Noise Amplifier for 6 GHz Applications

Filesize: 2.58 MB

Reviews

This pdf is indeed gripping and interesting. It is definitely simplistic but shocks within the 50 percent of your book. Once you begin to read the book, it is extremely difficult to leave it before concluding.
(Michael Spinka)

DESIGN AN ULTRA WIDEBAND LOW NOISE AMPLIFIER FOR 6 GHZ APPLICATIONS

To read **Design an Ultra Wideband Low Noise Amplifier for 6 GHz Applications** PDF, remember to follow the web link beneath and save the ebook or have access to other information that are in conjunction with DESIGN AN ULTRA WIDEBAND LOW NOISE AMPLIFIER FOR 6 GHZ APPLICATIONS ebook.

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | In recent years, down scaling in CMOS advanced technologies has provided high performance in the digital circuits and reduced cost thereby meeting to a large extent the increasing demand of wireless communication products. With this technology advancement, the unity-current gain frequency of CMOS technology is now over several tens of GHz making the realization of system on-chip solution possible which turns to further reduced cost. The concept of the RFIC design needed for the design of low noise amplifier such as gain, noise, stability, linearity, power consumption etc is discussed in the report. An overview has been given on different LNA architecture, their advantages and disadvantages have also been discussed. The designed circuit is simulated with the help of spectre simulator from cadence design system using UMC .18um CMOS technology. After the simulation we got the simulated result of low noise amplifier as forward voltage gain(S21) of 18.53dB, noise figure is 1.8dB and minimum noise figure is 1.6dB, input reflection coefficient (S11) is -24dB, output reflection coefficient(S22) is -15dB, stability factor (Kf) is 4, IIP3 -10 dBm by using power supply voltage of 1.8v. | Format: Paperback | Language/Sprache: english | 76 pp.
