CARNIVOROUS PLANTS OF AUSTRALIA MAGNUM OPUS, VOLUME 1 (HARDBACK)

Redfern Natural History Productions Ltd, United Kingdom, 2014. Hardback. Condition: New. Language: N/A. Brand New Book. Australia is home to over one third of all carnivorous plants species that are currently known worldwide. This amazing concentration is far greater than any other continent or country, and the Australian species include the largest, most spectacular and unusual representatives of many carnivorous plant groups (particularly sticky-leaved insect-eating plants). Australia also boasts several endemic carnivorous plant genera that occur no where else on earth. Over the past five decades, world renowned botanist Allen Lowrie has travelled across Australia to observe, study and photograph all carnivorous plant species of the continent. His pioneering efforts yielded the discovery and naming of dozens of new species and hundreds of the first photographs ever taken of nearly sixty carnivorous plant taxa. In 1987, Allen Lowrie published the first of a three-volume treatise documenting all Australian carnivorous plants known at that time. When the last book of the set was released in 1998, the three volumes had become the most highly respected, most popular and certainly the most valuable of all carnivorous plant publications produced since Charles Darwin s pioneering study on the subject that was printed over a century before. All three of Allen Lowrie s volumes quickly sold out, and continue to be treasured by book collectors across the world and traded for thousands of dollars. During the intervening 25 years since the publication of the original works, Allen Lowrie continued to undertake intensive field observations and he discovered many more new Australian carnivorous plants. He has carefully revised, updated and improved his original books and his life s work is now complete and released as Carnivorous Plants of Australia Magnum Opus, Volumes 1, 2 and 3. This incredible benchmark study offers a definitive, unparalleled and...
