

Self Microemulsifying Drug Delivery System For Some Drugs

Filesize: 5.5 MB

Reviews

Very useful for all group of people. It is amongst the most incredible pdf i actually have read through. Its been written in an extremely straightforward way and it is just right after i finished reading through this pdf by which basically modified me, change the way i think.

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Development And Evaluation Of Self Microemulsifying Drug Delivery System For High Molecular Weight Drugs | BCS class II are poorly water soluble and some drugs have high molecular weight, more than eleven hydrogen bond acceptors, more than five hydrogen bond donor. Thus, it exhibits poor bioavailability. A new Solid-Self Emulsifying Drug Delivery System (S-SMEDDS) of Drugs has been successfully developed to enhance its oral bioavailability by improving its solubility and facilitating high molecular weight of Drugs absorption. The primary composition of SMEDDS formulation was selected from solubility, pseudoternary phase diagram, emulsifying efficiency and compatibility test for preparation of (L-SMEDDS). Drug loaded L-SMEDDS were prepared in different concentration of oil, surfactant/co-surfactant and optimized by various evolutionary parameter such as robustness to dilution, drug content, ultrasonic interferometer, ease of emulsification, droplet size and in vitro diffusion study. The optimized L-SMEDDS converted into free flowing granules by spray drying technique. S-SMEDDS powder undergoes for characterization and confirmed the no interaction between drug and excipients. Thus, the present investigation improved the oral bioavailability of Drugs. | Format: Paperback | Language/Sprache: english | 280 pp.
