Reviews

An extremely wonderful pdf with lucid and perfect explanations. I could possibly comprehend every little thing out of this created e pdf. Once you begin to read the book, it is extremely difficult to leave it before concluding.

Kassel University Press Apr 2010, 2010. Taschenbuch. Book Condition: Neu. 211x148x10 mm. Neuware - With the rapid development of 3G-LTE and 4G broadband wireless communications, advanced power amplifiers with complex architectures have to be adopted to compile with the rigorous radio specifications. However, in practice, first-pass success implementation of such complex modern highly linear and efficient RF power amplifiers is exceedingly challenging for circuit designers mainly owing to the significantly increased circuit complexity. Following the conventional design approach, experience-based iterative and costly post-fabrication tuning work has to be performed very frequently to obtain the desired power amplifier characteristics. A novel partitioning design concept has been developed to facilitate the first-pass success realization of complex RF circuits. It is able to effectively eliminate lengthy build-and-try final post-fabrication tuning, by verifying the fabricated sub-circuit performance already during the design stage. Demonstrator of a single-ended class-AB RF power amplifier designed with AlGaAs/GaAs HEMT technology has successfully demonstrated the feasibility of this insightful design methodology, which can efficiently achieve the straightforward reliable RF power amplifier design while minimizing the entire time-to-market. 130 pp. Englisch.
