Storia Della Scultura Dal Suo Risorgimento in Italia Fino Al Secolo Di Canova Per Servire Di Continuazione Allopere Di Winckelmann E Di DAGincourt (6)

By -

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 50 pages. Original publisher: Hampton, Va : National Aeronautics and Space Administration, Langley Research Center : Institute for Computer Applications in Science and Engineering, 1985 OCLC Number: (OCoLC)476741760 Excerpt: . . . vectors or matrices in context. The vector-matrix combination is invalid because of the ambiguity in interpretation; the vector could be expanded either as a matrix of column vectors or of row vectors. The programmer must, in order to have a vector-matrix combination, use either MATC which generates a matrix of column vectors or MATR which generates a matrix of row vectors. The MERGE function sets the elements of matrix Z equal to the corresponding elements of X, for those elements of L which are true, and to the corresponding elements of Y, for those elements of L which are false. This function can be used to implement conditional, data dependent calculations. For example, a branch instruction with two branches can be implemented by (1) calculating the results of the first branch and storing them in matrix X; (2) calculating the results of the second branch and storing them in Y; (3...
