Transcendental numbers

By -

Reference Series Books LLC Jan 2012, 2012. Taschenbuch. Book Condition: Neu. 244x187x33 mm. This item is printed on demand - Print on Demand Neuware - Source: Wikipedia. Pages: 23. Chapters: E, Transcendental number, Chaitin's constant, Liouville number, Lindemann Weierstrass theorem, Baker's theorem, Schanuel's conjecture, Schneider Lang theorem, List of representations of e, Gelfond Schneider theorem, Four exponentials conjecture, Gelfond Schneider constant, Gelfond's constant, Universal parabolic constant, Cahen's constant, Six exponentials theorem, Gauss's constant, Prouhet Thue Morse constant, Hilbert number, Hypertranscendental number. Excerpt: The mathematical constant is the unique real number such that the value of the derivative (slope of the tangent line) of the function () = at the point = 0 is equal to 1. The function so defined is called the exponential function, and its inverse is the natural logarithm, or logarithm to base . The number is also commonly defined as the base of the natural logarithm (using an integral to define the latter), as the limit of a certain sequence, or as the sum of a certain series (see the alternative characterizations, below). The number is sometimes called Euler's number after the Swiss mathematician Leonhard Euler. (is not to be confused with the Euler Mascheroni...

Reviews

Complete guideline! Its this type of great read through. it absolutely was writtern quite perfectly and helpful. I am very happy to explain how this is basically the best book i actually have read through during my personal life and can be he very best book for at any time.

-- ***Joshua Gerhold PhD***

A very awesome book with perfect and lucid reasons. It really is basic but shocks within the 50 percent of the book. Its been designed in an exceptionally easy way and is particularly merely right after i finished reading this ebook where in fact changed me, change the way i think.
