Neat workers only can be accurate manipulators. Orderly work leads to fewer mistakes than work which is done hurriedly and without system or plan. In order to obtain proper quantitative results absolute cleanliness is essential. All of the apparatus used should be left in a chemically clean condition. Most of the apparatus can best be cleaned by rinsing well with warm water, then washing with soap and water and brush or cloth, then again rinsing well with warm water, and finally rinsing with distilled water. Never dry beakers or other chemical vessels with a towel. If it is necessary to dry a vessel quickly rinse with alcohol and ether and dry with a current of air or dry by gently warming after rinsing with. Distilled water. Use judgment in cleaning your apparatus. Always use the appropriate solvent first, then remove the excess of the solvent and continue the washing as above. Pipettes...
