

Botanical Contributions, Vol. 3 (Classic Reprint)

Filesize: 4.91 MB

Reviews

This written book is excellent. It typically is not going to price a lot of. I found out this book from my dad and i encouraged this book to discover.

(Darrin Abbott)

BOTANICAL CONTRIBUTIONS, VOL. 3 (CLASSIC REPRINT)**DOWNLOAD**

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Botanical Contributions, Vol. 3 This is doubtless a truly distinct species, growing six or seven feet high in alluvial soil, the greenish-white flowers fully half an inch long, the stem glabrous and glaucous. *Thelypodium* (*Pachypodium*, Nutt.) *Brachycarpum*, Torr. (in Wilkes S. Pacif. Ex. Exped. Bot. W. Amer. t. 1); caule virgato; foliis caulinis parvis crebriusculis sagittatis integerrimis erectis; racemo elongato angustissimo spiciformi; pedicellis calyce brevioribus; sepalis linearibus; petalis angustissime linearibus; antheris mucronatis; siliquis semi- aut sub-pollinaribus, valvis carinato-uninerviis. - Valley of Mono Lake, alt. 6,500 feet. This well-marked species having been rediscovered by Prof. Brewer, a diagnosis is here given, since that of Dr. Torrey is still unpublished, and the plate is little known. Dr. C.L. Anderson has collected it in Nevada, with a very long virgate spike, and with some mature fruit. *Smelowskia*? California: cinereo-puberula, glabrata; radice ut videtur annua vel bienni; caule 1 - 2-pedali; racemis demum paniculatis; foliis pinnatipartitis, segmentis 5 - 7 oblongis obtusis saepe 3 - 5-lobatis; floribus parvis luteis; calyce deciduo; siliculis pusillis ellipticis oblongisve utrinque acutis stylo brevissimo apiculatis, loculis 1 - 2-spermis. - On Mount Dana, alt.10,000 feet, June, in flower; and near Mono Lake, alt. 6,450, July, with young fruit. - With its annual or biennial root, and much the habit of *Sisymbrium canescens*, this would render the genus *Smelowskia* yet less natural; but here it technically belongs. The flowers are only a little long; the elliptical, ovoid, or somewhat fusiform silicles one or two lines long; valves very obscurely one-nerved; cells 2-ovulate. Young seeds oblong. *Draba eurycarpa*: multiceps, nana, stellato-tomentosa; foliis spatulatis integerrimis in caudice rosulato-confertis; scapo leviter exserto paucifloro; siliquis ovatis stylo subulato...
