Automata, Languages, and Programming

Filesize: 4.52 MB

Reviews

This pdf is so gripping and intriguing. I could comprehended almost everything using this composed e ebook. You are going to like just how the article writer create this ebook.

(Miss Dakota Zulauf)

AUTOMATA, LANGUAGES, AND PROGRAMMING

To read **Automata**, **Languages**, **and Programming** eBook, remember to refer to the link under and download the document or get access to additional information that are in conjuction with AUTOMATA, LANGUAGES, AND PROGRAMMING ebook.

Springer Jun 1984, 1984. Taschenbuch. Book Condition: Neu. 235x155x28 mm. This item is printed on demand - Print on Demand Titel. Neuware -The theory of data dependencies An overview.- The VLSI revolution in theoretical circles.- Tuple sequences and indexes.- The complexity of cubical graphs.- P-generic sets.- Functional dependencies and disjunctive existence constraints in database relations with null values.- The algebra of recursively defined processes and the algebra of regular processes.- Algebraic specification of exception handling and error recovery by means of declarations and equations.- Building the minimal DFA for the set of all subwords of a word on-line in linear time.- The complexity and decidability of separation.- Concurrent transmissions in broadcast networks.- Linear searching for a square in a word.- Domain algebras.- Principality results about some matrix languages families.- Oriented equational clauses as a programming language.- Relational algebra operations and sizes of relations.- Some results about finite and infinite behaviours of a pushdown automaton.- On the relationship of CCS and petri nets.- Communicating finite state machines with priority channels.- A modal characterization of observational congruence on finite terms of CCS.- Communication complexity.- Space and time efficient simulations and characterizations of some restricted classes of PDAS.- A complete axiom system for algebra of closed-regular expression.- The complexity of finding minimum-length generator sequences.- On probabilistic tape complexity and fast circuits for matrix inversion problems.- On three-element codes.- Recursion depth analysis for special tree traversal algorithms.- Performance analysis of Shamir's attack on the basic Merkle-Hellman knapsack cryptosystem.- Measures of presortedness and optimal sorting algorithms.- Languages and inverse semigroups.- Area-time optimal vlsi integer multiplier with minimum computation time.- On the interpretation of infinite computations in logic programming.- A linear time algorithm to solve the single function coarsest partition problem.- Complexité des facteurs des mots infinis engendrés par morphismes itérés.- Automates boustrophedon, semi-groupe de...
