Not illustrated. 1842 Excerpt: .Therefore the remaining root lies between--20 and--30. The place of this, therefore, is accurately determined; that is, its first figure is ascertained: it is--2, in the ten s place. But the situation of the other root, that between 0 and--10, is not yet discovered with sufficient precision, as we cannot at present pronounce upon its first figure. We must therefore be more minute in. our analysis of the proposed equation within the limits of $a = 0$ and $x = -10$: that is, we must subdivide this interval as follows: $x = 0$.-----+ one variation--2, . +-----+ two variations. Hence the root sought lies between--1 and--2. Its first figure is therefore--1 in the unit s place. It ought to be remarked, however, that when, as in the present case, only a single root lies in the interval to be examined, the substitutions need not be made in any polynomial but the first. It is plain that we have to continue these substitutions only till X changes sign, when the situation of the root becomes known. And thus, in Example 2, the substitutions--3, --4, --5, --6 need have been made only in X; so that the other columns of signs, furnished by these substitutions, are superfluous. 5. It is required to analyse the equation $513--8r- +23x--17 = 0$ Here And it is easy to see, from an inspection of the coefficients of this expression, that four times the product of the extreme terms exceeds the square of the...
