

Socioeconomic Status in Early Childhood and Severe Mental Illness: An Empirical Investigation of All Danish Men Born in 1981

By Jane Greve

University Press of Southern Denmark. Paperback. Book Condition: new. BRAND NEW, Socioeconomic Status in Early Childhood and Severe Mental Illness: An Empirical Investigation of All Danish Men Born in 1981, Jane Greve, Mental illnesses, such as schizophrenia, affective disorders and personality disorders, are associated with heavy economic and non-economic burdens. This paper examines the relationship between socio-economic status in early childhood and the probability of developing schizophrenia, affective disorders and personality disorders. We use a sample of all Danish men born in 1981 and control for family factors one year before the birth of the child. The results show that men born in low-income families are more likely to be hospitalised with affective disorders. Men born in families where the father was not employed at the child's birth are more likely to be hospitalised with schizophrenia or personality disorder, than men born in families where the father was employed as wage-earner. In general, few people in the population have a severe mental illness and, consequently, the probability of developing a severe mental illness is low. However, the relative differences in the predicted probability of developing a mental illness are large when we compare children who grew up families with average...

Reviews

This is the finest book i have got study right up until now. I am quite late in start reading this one, but better then never. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Keanu Johns**

This is the finest book i have read until now. It is filled with wisdom and knowledge You can expect to like just how the author compose this ebook.
