Excerpt from Walton and Holmes s Arithmetics First Book This book is the first of a series designed to give a complete course of study in arithmetic for elementary grades beyond the second year in school. Part I is intended for a review of such ground as the pupil should have covered before beginning the use of a text-book. It takes up counting to one hundred and the combinations of numbers to twenty as a number limit. In this part of the book, oral and mental exercises predominate. Part II introduces more advanced written and oral work, and makes steady progress in measurements, denominate numbers, and simple fractions. It is designed to serve the teacher as a guide and the pupil as a text-book for the advance work in numbers to be taken in the third school year. Recent changes in thought and practice as to numbers and number teaching have been met in, what is believed to be a rational manner. Diagrams, illustrations, measurements, etc., have been liberally employed. The idea that notions of number and numerical Operations should be acquired from the concrete has been given full recognition. Measuring and comparison of magnitudes and values are constantly employed and are made the basis for abstract number concepts.
