Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1882 Excerpt: .the results of their researches upon this subject. Mr. Jacobson6 refers to these publications, and remarks that Teissier asserted that long-continued immobility may produce-- 1. Escape of blood or serum into the cavity, into the subsynovial cellular tissue, or into the soft parts outside the joint. 2. Vascular injections of the synovial fringes, with formation of false membranes. 3. Alterations of the cartilage, e.g. swelling, softening, and erosion. 4. Ankylosis; this is shown to be not only frequently fibro-cellular, but in one case at least, where the thigh was amputated for non-union of a fractured femur after twenty-two months of extension and immobility, it is proved that actual fusion of contiguous articular surfaces may take place. M. Teissier believed that immobility of the joint caused suppression of the synovial fluid, which further caused engorgement of the joint structures. 1 Atlas of Histology, pi. viii. fig. xiv.,...
