Socio-Economics of the Mud Crab Fatteners in Bangladesh

By Mohammad Ali, Mir

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Present Status, Marketing, Constrains and Recommendation for Sustainable Development | Mud Crabs become one of the commercially important aquaculture species with their increased global acceptance as high quality seafood as well as their substantial socio-economic role in artisanal coastal fisheries in many tropical and subtropical Asian countries. Sudden fluctuations in market prices, inadequate and poor quality of seed crab at higher prices, improper quality of feed ingredient, lack of strong domestic demand for mud crab, and poor transport facility in the remote rural areas were identified as the key factors for occasional loss in fattening business. In addition, most of the fatteners did not get any training on technical aspects of crab fattening or financial support at lower interest rates. The development of crab seed hatchery, artificial feed for crab, and strongest marketing network are addressed as crux issues for the sustainability of mud crab aquaculture in Bangladesh. | Format: Paperback | Language/Sprache: english | 76 pp.

Reviews

This publication could be worthy of a study, and superior to other. it was writtern extremely perfectly and beneficial. I am just easily could possibly get a delight of reading through a published pdf.

-- Prof. Bernie Torphy

I just started off reading this article ebook. It is actually writter in basic words and not confusing. I am just very happy to let you know that this is the best ebook i actually have read through inside my individual daily life and can be he finest ebook for possibly.
