

Statistical Inference in Autoregressive Models

By Ramanjineyulu, B. / Pagadala, Balasiddamuni

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Estimation of Autoregressive Models | In this book, an attempt has been made by developing some inferential methods for autoregressive models by using Internally studentized residuals. In the Applied regression analysis, the autoregressive models, moving average models and combined autoregressive and moving average models have a wide number applications. The study on autoregressive process/models is considered to be essential to both the theoretical and applied statisticians. The first order and higher order autoregressive models for regressed variable and errors have been described by giving auto covariance functions. Further, an autoregressive dynamic model without constant term has been specified and in the presence of lagged dependent variable, a modified durbin s h-statistic for testing the hypothesis of no auto correlation has been developed for first order autoregressive error process. Instrumental variable method of estimation has been proposed to estimate the parameters of first order autoregressive errors model with lagged dependent variable as regressor and hence obtained estimates for autocorrelation co-efficients based an Internally studentized residuals. | Format: Paperback | Language/Sprache: english | 260 pp.

Reviews

It becomes an incredible book that we actually have possibly study. It really is rally exciting throgh studying period of time. I am very easily could get a satisfaction of reading through a written book.

-- Gianni Hoppe

A really awesome pdf with perfect and lucid reasons. It is actually rally fascinating throgh reading period of time. Your lifestyle period will probably be transform as soon as you total looking over this ebook.

-- Alford Kihn
