

Projective geometry Volume 1

Filesize: 5.91 MB

Reviews

This ebook is worth acquiring. Better then never, though i am quite late in start reading this one. You will not truly feel monotony at at any time of your own time (that's what catalogues are for about if you ask me).
(Lorenz Vandervort)

PROJECTIVE GEOMETRY VOLUME 1

To get **Projective geometry Volume 1** eBook, please follow the web link under and download the file or have accessibility to additional information that are in conjunction with PROJECTIVE GEOMETRY VOLUME 1 ebook.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 110 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1910 edition. Excerpt: . . . The coordinates of a double point $(xv\ x)$ must satisfy the equations $pxi\ ax1\ bx2$, $px\ cx1\ dxr$ These equations are compatible only if the determinant of the system $3\ (a-p)c1bx20$, $cxl(d-p)x0$, vanishes. This leads to the equation $a-p\ b\ l\ c\ d--p$ for the determination of the factor of proportionality p . This equation is called the characteristic equation of the matrix representing the projectivity. Every value of p satisfying this equation then leads to a double point when substituted in one of the equations (3); viz. , if p , be a solution of the characteristic equation, the point $(xv\ ag\ (-b, a-pl)\ (d-pv-c)$ is a double point. In homogeneous coordinates the cross ratio $R\ (AB, CD)$ of four points $A\ (av\ a3)$, $B\ (bv\ ft2)$, $C\ (cv\ c2)$, $D\ (dv\ d)$ is given by $(ac)\ (be)\ (ad)\ (bd)$ where the expressions (ac) , etc. , are used as abbreviations for $a--a$, etc. This statement is readily verified by writing down the above ratio in terms of the nonhomogeneous coordinates of the four points. We will close this section by giving to the two homogeneous coordinates of a point on a line an explicit geometrical significance. In view of the fact that the coordinates of such a point are not uniquely determined, a factor of proportionality being entirely arbitrary, there may be many such interpretations. On account of the existence of this arbitrary factor, we may impose a further condition on the coordinates $(xv\ x2)$...
