These conclusions in brief synopsis are herewith presented. 1. The total water lost in transmission through the canals from point of diversion at the river to place of use on the farmers land, including losses in farmers ditches, ranges from 67 to 75 of the total amount diverted from the river. 2. The losses in main canals and laterals from river diversion to point of delivery by the Company at or within one-half mile of the farmers land, range from 45 to 57 of that diverted. Losses in main canals alone amount to from 25 to 40 of the water diverted from the river. 3. These heavy losses seem to be due to the porous, seamy nature of the lava rock which underlies the greater part of the segregation, to the relatively shallow soil,...
