Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Semi-Monthly News Letter, 1941, Vol. 13: The Official Organ of the Division of Fruit and Vegetable Crops and Diseases, Bureau of Plant Industry, United States Department of Agriculture Incidentally, besides spurring Irish emigration, the ravages of late blight focused attention on potato diseases and the necessity for their control. In the long run we came to believe that diseases and pests of the potato are best controlled by the creation of new sorts resistant to their attacks, so we come down to the high water mark in the organization of the National Potato Breeding Program, in which 34 States and the Territory of Hawaii cooperate with each other and with us. This program has already yielded (1) Information on the inheritance of resistance to late blight in both vines and tubers; (2) promising varieties immune from late blight produced by crossing two species of *Solanum* (*demissum* and *tuberosum*); (3) indications that resistance to *Fusarium* wilt is to be found in the cultivated varieties, and that the development of varieties tolerant to its attacks is possible; (4) resistance to bacterial brown rot in Florida; (5) immunity from mild mosaic in the field; (6) immunity from the latent virus X; (7) the discovery that some varieties and seedlings become infected with leafroll in the field far less readily than others; (8) production of varieties tolerant to leafhoppers and flea beetles; and (9) resistance to psyllid yellows. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work.
