

Modern Chemistry, Vol. 2 of 2: Systematic Chemistry (Classic Reprint) (Paperback)

By William Ramsay

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Modern Chemistry, Vol. 2 of 2: Systematic Chemistry Reference has already been made in Part I. To the different processes which may be used for the isolation of elements from their compounds. But there exists a group of elements, that of which the first member is helium, which form no compounds, and which therefore are found only in a free state. It is, therefore, convenient to begin with these. The helium Group - These elements are all gases at the ordinary temperature of the atmosphere, and they are consequently all to be found in atmospheric air. They are colourless, even in the liquid condition, and are devoid of smell and taste. They are very sparingly soluble in water for example, 100 volumes of water dissolve only 4. 1 volumes of argon at Their preparation consists, first, in the separation of the other constituents of air from them, and.
