

## A Geometrical Curves Which Curves Isogonal Conjugate to a Straight, Line with Respect to a Triangle in Two Parts, Vol. 1 of 2 (Classic Reprint)

Filesize: 5.5 MB

### **Reviews**

*Very useful for all group of people. It is amongst the most incredible pdf i actually have read through. Its been written in an extremely straightforward way and it is just right after i finished reading through this pdf by which basically modified me, change the way i think.*  
(Felicia Nikolaus)

## A GEOMETRICAL CURVES WHICH CURVES ISOGONAL CONJUGATE TO A STRAIGHT, LINE WITH RESPECT TO A TRIANGLE IN TWO PARTS, VOL. 1 OF 2 (CLASSIC REPRINT)

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from **A Geometrical Curves Which Curves Isogonal Conjugate to a Straight, Line With Respect to a Triangle in Two Parts, Vol. 1 of 2 1**. Two straight lines are said to be isogonal conjugate with respect to an angle when they form equal angles with the bisector of the angle. Let the point of intersection of three straight lines, each drawn from an angular point of a triangle, be  $O$ , then their isogonal conjugates will also intersect in one point, say  $O'$ , which is called the isogonal conjugate point to the point  $O$ , with respect to the three angles of the triangle. The isogonal conjugate points to all points on a straight line with respect to a triangle will form a curve which is said to be isogonal conjugate to the straight line with respect to the triangle. If all the points on a straight line  $LL$ , Fig. 1, are joined with the angular points  $B$ , and  $C$ , of the triangle  $ABC$ , then we get two projective flat pencils which are also perspective to one another, since the intersection of the corresponding rays are collinear. The isogonal conjugate points to all points on  $LL$ , joined to  $B$  and  $C$ , will form two projective flat pencils. The intersections of two corresponding rays are in general not on the same straight line, and are therefore not perspective; and their locus is a conic section, as is known from the fundamental laws of projective geometry. 2. The conic isogonal conjugate to a straight line with respect to a triangle will pass through the angular points of the triangle. It will pass through  $B$  and  $C$ , Fig....
