With a single condenser the signals are sent from Newfoundland in the following manner: When a key is depressed at T, the electric current, for example the H-E, flows directly into the cable K, and arriving at Valentia, flows almost entirely into the side of the condenser C, which is attached to the cable, the resistance of RII being so great that comparatively little of it goes to the earth. The accumulation of + E in one side of the condenser causes a like quantity of...

This book is definitely worth acquiring. I have gone through and so I am certain that I will likely read through again in the future. It's been printed in an exceptionally basic way in fact it is only after I finished reading this publication in which it actually altered me, changing the way in my opinion.
