Createspace, United States, 2014. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.An excerpt from the Author s PREFACE: THIS book is intended primarily for the use of those engaged in the practical operation of Radio-Telegraph installations and for students who already possess some knowledge of electrical science. The first portion of the book (Chapters I.-V.) deals with the production and radiation of electric oscillations and waves, followed by a description of the various pieces of apparatus which go to make up a Radio-Telegraph installation and the principles which govern their construction and erection. Following this will be found descriptions of the principal systems. Chapter VI. is devoted to the Marconi system, which is the principal system employing the spark method of generating electrical oscillations. In this chapter will be found a full description of the Marconi 11/2 kw. ship set. This type of installation is in such very general use that hardly any students sitting for the P.M.G. s certificate pass their examination on any other apparatus. For this reason considerable space has been devoted to it and the various pieces of apparatus fully illustrated. Chapter VII. deals with the Poulsen system, which is representative of the arc method of generating electrical oscillations. In it will be found a full description of Poulsen apparatus, both for hand and automatic working. The quenched-spark method of generating electrical oscillations is represented by a description of a Telefunken I.T.K. set and of the Lepel system. Following this will be found a description of the Goldschmidt high-frequency alternator, a machine which in the future may play a leading part in long-distance wireless telegraphy. A special chapter is devoted to portable installations, and sets suitable for airships, military purposes, yachts and small craft generally...
