INFRARED SPECTROSCOPIC INVESTIGATIONS ON II-VI SEMI-MAGNETIC SEMICONDUCTORS

Cuvillier Verlag Feb 2006, 2006. Taschenbuch. Condition: Neu. Neuware - In this dissertation, we investigated ZnSe-based materials, which are interesting for a variety of potential applications in various devices. There was only limited information available in the literature about Zn_{1-x}Mn_xSe material parameters like the electron effective mass and transport properties. In this work, we explored many new details about this interesting material using Fourier transform infrared spectroscopy and some other experimental techniques. The fundamental aspects related to lattice vibrations in...
