

The Plane Geometry of the Point in Point-Space of Four Dimensions

Filesize: 6.12 MB

Reviews

A superior quality publication along with the font used was fascinating to learn. I have read through and i also am certain that i am going to going to go through yet again again in the future. Your life period will likely be enhance the instant you total reading this publication.

To get **The Plane Geometry of the Point in Point-Space of Four Dimensions** eBook, you should refer to the link below and download the file or have access to additional information which are related to THE PLANE GEOMETRY OF THE POINT IN POINT-SPACE OF FOUR DIMENSIONS book.

Createspace, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.From the Introductory Considerations of The Plane Geometry of the Point in Point-Space of Four Dimensions, by C. J. Keyser. 1. As is well known, the dimensionality (in Riemann's sense) of any given space depends upon the element chosen for its construction; and in accordance with the Plucker principle of counting constants, any given space may be made to assume any prescribed dimensionality k by merely taking for element a configuration for whose determination within that space k independent data are necessary and sufficient - a configuration, in other words, whose general analytical representation in the given space involves exactly k parameters. A space being assumed, there are, in general, infinitely many possible choices of element for which the space will have a previously assigned dimensionality. Of such possible choices the great majority would be inexpedient as not leading to interesting results. Of all elements, in case of any given space, those are, in general, most practicable which present themselves in pairs of reciprocals, as in the familiar examples of the point and line in the plane, the line and plane in the sheaf, and the point and plane in ordinary space. A space that is n -dimensional in points is also n -dimensional in point-spaces of $n - 1$ dimensions. It has $2(n - 1)$ dimensions both in lines and in point-spaces of $n - 2$ dimensions; and, in general, its dimensionality is $p(n - p + 1)$ if the point-space either of $p - 1$ or of $n - p$ dimensions be taken as element. Not only, however, do the two last mentioned elements furnish the same dimensionality, which is a necessary...
