Diffuse X-Ray Emission from M101

By K. D. Kuntz

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 26 pages. Dimensions: 9.7in. x 7.4in. x 0.1in.The total 0. 45-2. 0 keV luminosity of M101 is 3. 1 x 10(exp 39) ergss, of which 2. 2 x 10(exp 39) ergss is due to diffuse emission. Of the diffuse emission, no more than 6 can be due to unresolved point sources such as X-ray binaries, and approx. 11 is due to dwarf stars. The diffuse emission traces the spiral arms and is roughly correlated with the H alpha and FUV (far ultraviolet) emission. The radial distribution closely follows the optical profile. The bulk of the diffuse emission is characterized by a two thermal component spectrum with kT 0. 20, 0. 75 keV, and the ratios of the emission measures of the two components is roughly constant as a function of both radius and surface brightness. The softer component has a sufficiently large covering factor that the bulk of the emission is likely extra-planar. We find no evidence of an extended axisymmetric X-ray halo, suggesting that any such halo has a strength much smaller than current predictions. This item ships from La Vergne,TN. Paperback.

Reviews

It becomes an incredible book that we actually have possibly study. It really is rally exciting throgh studying period of time. I am very easily could get a satisfaction of reading through a written book.
-- ***Gianni Hoppe***

A really awesome pdf with perfect and lucid reasons. It is actually rally fascinating throgh reading period of time. Your lifestyle period will probably be transform as soon as you total looking over this ebook.
