Small Ruminant: Emerging Diseases Containment Under WTO Regime

By V.S. Vihan

Satish Serial Publishing House, 2007. Hardcover. Condition: New. Goats and sheep are the two important livestock species in the livestock production systems and are undergoing a phenomenal change during last few years. Its economic importance has further increased and likely to zoom in coming years. They support a large population of the rural landless and marginal farmers and have an important role to play in any programme aimed to alleviate rural poverty and livelihood security particularly in arid, semiarid and hilly regions of the country. Their contribution to the economy constituted about 5.40% of the GNP to the Agriculture Sector. The incidence of diseases and parasitic infestations in small ruminants is one of the major constraints in the development of this enterprise and is reported to cause huge loss to the poor goat keepers and consequently to the Indian economy. Diseases result into very high mortality which ranges from 5 to 25%. In addition, diseases also cause morbidity losses in terms of low productivity of animals. There are heavy losses of good germ plasm due to diseases. Many exotic and emerging diseases like PPR, Sheep and Goat Pox and Blue tongue are causing substantial losses. Due to the prevalence of...
