Reviews

Very beneficial to any or all group of folks. I was able to comprehend everything using this composed e ebook. I am pleased to inform you that here is the finest publication i have study inside my individual daily life and might be he very best pdf for actually.

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | This book contains the elementary aspects of flow, heat and mass transfer of boundary layer flow problems related to Oldroyd-B fluid and Casson fluid with suspended nano particles, with special emphasis on slip flow and nonlinear thermal radiation so that the subject is perceived by the post graduate students, researchers and post-doctoral researchers. This text is also introduces numerical computational tools for solving differential equation models that arises in fluid flow, heat and mass transfer of non-Newtonian fluids. Suitable similarity transformations are applied to the governing partial differential equations to obtain coupled nonlinear ordinary differential equations. The reduced equations are solved numerically by using Runge-Kutta-Fehlberg fourth-fifth order method with Shooting technique. | Format: Paperback | Language/Sprache: english | 76 pp.
